Information for all JS Chemistry Students

Junior Sophister 2016/7

Welcome back to the School of Chemistry for your JS year. We hope you have a wonderful experience in a year that is quite a transition from the earlier JF and SF years. The JS and SS years bring about more in-depth chemistry education than you have experienced before, with greater emphasis on theoretical as well as practical education and training. We wish you all the best for this academic year and the staff of the School of Chemistry look forward to working with you. **This year's Year Coordinator is Prof. Mike Southern (southerj@tcd.ie).**

Introduction to Chemistry at TCD

Chemistry holds a key position among the sciences. It is the study of matter, that is, the composition, structure and properties of substances and the changes they undergo. Life on Earth owes its origin to a series of these chemical changes. Formal chemistry teaching in TCD commenced in August 1711 as part of the new School of Medicine. The main building includes two lecture theatres and four recently refurbished research laboratories. A new suite of teaching laboratories (the Cocker laboratories) was completed in September 1997 and provides facilities for the teaching of preparative inorganic and organic chemistry. The Sami Nasr Institute for Advanced Materials (SNIAM), which was completed in 2000, provides *ca.* 1500 m² of accommodation for the School of Chemistry. This includes a Physical Chemistry teaching laboratory and six research laboratories that house *ca.* 40 researchers. This institute also houses the School of Physics. Computational Chemistry research is housed in the Lloyd Institute on a multidisciplinary computational-science floor comprising researchers from Mathematics, Physics, Chemistry and High Performance Computing. In addition, chemists play an important role in interdisciplinary research taking place in two of TCD's newest research institutes: (i) the Nanoscience Institute – The Centre for Research on Adaptive Nanostructures and Nanodevices (CRANN), which was formally opened in January 2008 and (ii) the Trinity Biomedical Sciences Institute (TBSI), which was inaugurated in July 2011.

Moderatorship in Chemistry

The School of Chemistry currently offers four Moderatorships, namely Chemistry, Medicinal Chemistry (MedChem), Chemistry with Molecular Modelling (CMM), and Nanoscience, Physics and Chemistry of Advanced Materials (N-PCAM), which is a joint course offered by the Schools of Physics and Chemistry. All of these courses with the exception of Chemistry have been developed in response to changes in the modern subject and identified needs for graduates with special skills in Ireland.

Staff, Research and Facilities

The School currently has 23 academic staff and 15 technical staff. The School has an active research programme, with approximately 130 postgraduate students and postdoctoral researchers. They study a range of subjects such as organic, inorganic, organometallic, physical, theoretical, medicinal, analytical, material, polymer, environmental, and supramolecular chemistry. Research income is earned from national, international and commercial sources and the School has held grants in all relevant research programmes funded by the EU.

The College also fosters an interdisciplinary approach to research, with members of the School having strong links with colleagues in the physical, technological and biological sciences both within College, nationally and internationally.

The school is well equipped for its research activities, having Agilent 800 and 400 MHz, and Bruker 600 and 400 MHz high-field multi-nuclear NMR, FTIR, dispersive IR and UV-visible spectrometers, high performance liquid (HPLC) and gas (GC) chromatography equipment, a Rigaku Saturn 724 Diffractometer and Bruker SMART APEX single crystal and Siemens D500 powder diffractometers, Micromass LCTTM (TOF) mass spectrometer, thermogravimetric analysis and differential scanning calorimetry, dynamic light scattering, several spectrofluorimeters for steady-state and time-resolved fluorescence measurements, circular and linear dichroism, and a large range of wave generators and potentiostats for cyclic voltammetry.

Lectures

Lectures should begin on the hour and end ten minutes to the hour. Timetables will be published through my.tcd.ie. These should be checked regularly for changes to the original schedule. Attendance at lectures may be recorded. All lectures are complemented by tutorials. Attendance at tutorials may be recorded.

Practicals

In the JS year, practical classes take place over one-and-a-half days. In **Semester 1** there are 6 weeks of organic chemistry and 4 weeks of inorganic chemistry in the Cocker lab; in **Semester 2**, there are 2 weeks of inorganic chemistry in the Cocker lab and 7 weeks of physical chemistry in the SNIAM building. Practical work is assessed in-course, with the lab marks for the inorganic, organic and physical chemistry practicals contributing to 50% of the overall mark for the 10-ECTS modules CH3103, CH3203 and CH3304, respectively.

Attendance at chemistry practical classes is compulsory for students in all years. **Students may be deemed non-satisfactory if they miss more than a third of their course of study or fail to submit a third of the required course work in any semester.**

Examinations

Your attention is drawn to the Science examination regulations, which prescribe the level of performance you must achieve in order to be permitted to proceed to the Senior Sophister year. A bare pass in the examination is not sufficient. Full details of the Junior Sophister Science (TR071) examination regulations may be found at the end of this booklet. The same regulations apply to Medicinal Chemistry and CMM students.

Prizes

The Dr. George A. Lonergan prize, value €381, is awarded annually to the student who gives the best performance in the Junior Sophister year, provided sufficient merit is shown.

JS contribution to final degree mark

The JS Chemistry mark makes up **35%** of the final degree mark.

Senior Sophister year

Semester 1 of the Senior Sophister year is spent working full-time on a research project in TCD, in industry or at a university abroad. The School encourages interested students to go abroad if they so wish. Those achieving a grade of II-1 or higher in their JS year will have automatic approval to go abroad but for those with lower grades, the request will be reviewed on a case-by-case basis. Prof. Yurii Gun'ko will coordinate these projects and arrangements are made during the JS year.

Careers

Since some students will be away from College during the first semester of the SS year, it is desirable that you make contact with the Careers Office in the JS year. Fiona Hayes (Fiona.Hayes@tcd.ie), Careers Advisor, will be glad to get your names on her files and will visit the School to explain what the Careers Office can do for you.

Career prospects in Chemistry are good, although you should realise that a primary degree may not be enough to gain immediate employment in research and development; an additional qualification, such as a diploma or higher degree, will be useful.

Library

Much of your regular reading will depend on textbooks in the Hamilton Library. In addition, many of the research journals, collections of data and Chemical Abstracts are now available on-line *via* the Library's website.

Seminars and Special Lectures

You are expected to attend the School's research seminars, which are held at noon on Thursdays. During the year, lectures on various topics will be arranged by the School, the Werner Chemical Society, the Royal Society of Chemistry or the Institute of Chemistry of Ireland. You will find many of them interesting and valuable. Attendance at these lectures is recorded.

School of Chemistry: Scheme for marking of examination answers in Sophister years

Mark Range	Criteria
90-100	IDEAL ANSWER; showing insight and originality and wide knowledge. Logical, accurate and concise presentation. Evidence of reading and thought beyond course content. Contains particularly apt examples. Links materials from lectures, practicals and seminars where appropriate.
80-89	OUTSTANDING ANSWER; falls short of the 'ideal' answer either on aspects of presentation or on evidence of reading and thought beyond the course. Examples, layout and details are all sound.
70-79	MAINLY OUTSTANDING ANSWER; falls short on presentation and reading or thought beyond the course, but retains insight and originality typical of first class work.
65-69	VERY COMPREHENSIVE ANSWER; good understanding of concepts supported by broad knowledge of subject. Notable for synthesis of information rather than originality. Sometimes with evidence of outside reading. Mostly accurate and logical with appropriate examples. Occasionally a lapse in detail.
60-64	LESS COMPREHENSIVE ANSWER; mostly confined to good recall of coursework. Some synthesis of information or ideas. Accurate and logical within a limited scope. Some lapses in detail tolerated.
55-59	SOUND BUT INCOMPLETE ANSWER; based on coursework alone but suffers from a significant omission, error or misunderstanding. Usually lacks synthesis of information or ideas. Mainly logical and accurate within its limited scope and with lapses in detail.
50-54	INCOMPLETE ANSWER; suffers from significant omissions, errors and misunderstandings, but still with understanding of main concepts and showing sound knowledge. Several lapses in detail.
45-49	WEAK ANSWER; limited understanding and knowledge of subject. Serious omissions, errors and misunderstandings, so that answer is no more than adequate.
40-44	VERY WEAK ANSWER; a poor answer, lacking substance but giving some relevant information. Information given may not be in context or well explained, but will contain passages and words that indicate a marginally adequate understanding.
35-39	MARGINAL FAIL; inadequate answer, with no substance or understanding, but with a vague knowledge relevant to the question.
30-34	CLEAR FAILURE; some attempt made to write something relevant to the question. Errors serious but not absurd. Could also be a sound answer to the misinterpretation of a question.
0-29	UTTER FAILURE; with little hint of knowledge and serious errors. Could also be a trivial response to the misinterpretation of a question.

Schedule of Grades	
I	= 70%+
II-1	= 60-69%
II-2	= 50-59%
III	= 40-49%
F-1	= 30-39%
F-2	= 0-29%

Important additional information for all JS-Chemistry Students

PLAGIARISM

Simply put, plagiarism is the presentation of the work of someone else as your own - the university takes plagiarism offences extremely seriously. Information on what constitutes plagiarism and how the university deals with it can be found in the central repository on plagiarism:

<http://tcd-ie.libguides.com/plagiarism>

All students must complete our [Ready Steady Write plagiarism tutorial](http://tcd-ie.libguides.com/plagiarism/ready-steady-write) (<http://tcd-ie.libguides.com/plagiarism/ready-steady-write>) and sign a declaration when submitting course work, whether in hard or soft copy or via Blackboard, confirming that you understand what plagiarism is and have completed the tutorial.

COLLEGE REGULATION REGARDING PLAGIARISM: EXTRACT FROM THE COLLEGE CALENDAR 2016/17

82 General

It is clearly understood that all members of the academic community use and build on the work and ideas of others. It is commonly accepted also, however, that we build on the work and ideas of others in an open and explicit manner, and with due acknowledgement.

Plagiarism is the act of presenting the work or ideas of others as one's own, without due acknowledgement.

Plagiarism can arise from deliberate actions and also through careless thinking and/or methodology. The offence lies not in the attitude or intention of the perpetrator, but in the action and in its consequences.

It is the responsibility of the author of any work to ensure that he/she does not commit plagiarism.

Plagiarism is considered to be academically fraudulent, and an offence against academic integrity that is subject to the disciplinary procedures of the University.

83 Examples of Plagiarism

Plagiarism can arise from actions such as:

- (a) copying another student's work;
- (b) enlisting another person or persons to complete an assignment on the student's behalf;
- (c) procuring, whether with payment or otherwise, the work or ideas of another;
- (d) quoting directly, without acknowledgement, from books, articles or other sources, either in printed, recorded or electronic format, including websites and social media;
- (e) paraphrasing, without acknowledgement, the writings of other authors.

Examples (d) and (e) in particular can arise through careless thinking and/or methodology where students:

- (i) fail to distinguish between their own ideas and those of others;
- (ii) fail to take proper notes during preliminary research and therefore lose track of the sources from which the notes were drawn;
- (iii) fail to distinguish between information which needs no acknowledgement because it is firmly in the public domain, and information which might be widely known, but which nevertheless requires some sort of acknowledgement;
- (iv) come across a distinctive methodology or idea and fail to record its source.

All the above serve only as examples and are not exhaustive.

84 Plagiarism in the context of group work

Students should normally submit work done in co-operation with other students only when it is done with the full knowledge and permission of the lecturer concerned. Without this, submitting work which is the product of collusion with other students may be considered to be plagiarism.

When work is submitted as the result of a group project, it is the responsibility of all students in the group to ensure, so far as is possible, that no work submitted by the group is plagiarised.

85 Self plagiarism

No work can normally be submitted for more than one assessment for credit. Resubmitting the same work for more than one assessment for credit is normally considered self-plagiarism.

86 Avoiding plagiarism

Students should ensure the integrity of their work by seeking advice from their lecturers, tutor or supervisor on avoiding plagiarism. All schools and departments must include, in their handbooks or other literature given to students, guidelines on the appropriate methodology for the kind of work that students will be expected to undertake. In addition, a general set of guidelines for students on avoiding plagiarism is available on <http://tcd-ie.libguides.com/plagiarism>.

87 If plagiarism as referred to in §82 above is suspected, in the first instance, the Director of Teaching and Learning (Undergraduate), or their designate, will write to the student, and the student's tutor advising them of the concerns raised. The student and tutor (as an alternative to the tutor, students may nominate a representative from the Students' Union) will be invited to attend an informal meeting with the Director of Teaching and Learning (Undergraduate), or their designate, and the lecturer concerned, in order to put their suspicions to the student and give the student the opportunity to respond. The student will be requested to respond in writing stating his/her agreement to attend such a meeting and confirming on which of the suggested dates and times it will be possible for them to attend. If the student does not in this manner agree to attend such a meeting, the Director of Teaching and Learning (Undergraduate), or designate, may refer the case directly to the Junior Dean, who will interview the student and may implement the procedures as referred to under conduct and college regulations §2.

88 If the Director of Teaching and Learning (Undergraduate), or designate, forms the view that plagiarism has taken place, he/she must decide if the offence can be dealt with under the summary procedure set out below. In order for this summary procedure to be followed, all parties attending the informal meeting as

noted in §87 above must state their agreement in writing to the Director of Teaching and Learning (Undergraduate), or designate. If the facts of the case are in dispute, or if the Director of Teaching and Learning (Undergraduate), or designate, feels that the penalties provided for under the summary procedure below are inappropriate given the circumstances of the case, he/she will refer the case directly to the Junior Dean, who will interview the student and may implement the procedures as referred to under conduct and college regulations §2.

89 If the offence can be dealt with under the summary procedure, the Director of Teaching and Learning (Undergraduate), or designate, will recommend one of the following penalties:

- (a) Level 1: Student receives an informal verbal warning. The piece of work in question is inadmissible. The student is required to rephrase and correctly reference all plagiarised elements. Other content should not be altered. The resubmitted work will be assessed and marked without penalty;
- (b) Level 2: Student receives a formal written warning. The piece of work in question is inadmissible. The student is required to rephrase and correctly reference all plagiarised elements. Other content should not be altered. The resubmitted work will receive a reduced or capped mark depending on the seriousness/extent of plagiarism;
- (c) Level 3: Student receives a formal written warning. The piece of work in question is inadmissible. There is no opportunity for resubmission.

90 Provided that the appropriate procedure has been followed and all parties in §87 above are in agreement with the proposed penalty, the Director of Teaching and Learning (Undergraduate) should in the case of a Level 1 offence, inform the course director and where appropriate the course office. In the case of a Level 2 or Level 3 offence, the Senior Lecturer must be notified and requested to approve the recommended penalty. The Senior Lecturer will inform the Junior Dean accordingly. The Junior Dean may nevertheless implement the procedures as referred to under conduct and college regulations §2.

91 If the case cannot normally be dealt with under the summary procedures, it is deemed to be a Level 4 offence and will be referred directly to the Junior Dean. Nothing provided for under the summary procedure diminishes or prejudices the disciplinary powers of the Junior Dean under the 2010 Consolidated Statutes.

College Calendar 2016-17

DESCRIPTION OF THE EUROPEAN CREDIT TRANSFER SYSTEM (ECTS)

The European Credit Transfer and Accumulation System (ECTS) is an academic credit system based on the estimated student workload required to achieve the objectives of a module or programme of study. It is designed to enable academic recognition for periods of study, to facilitate student mobility and credit accumulation and transfer. The ECTS is the recommended credit system for higher education in Ireland and across the European Higher Education Area.

The ECTS weighting for a module is a **measure of the student input or workload** required for that module, based on factors such as the number of contact hours, the number and length of written or verbally presented assessment exercises, class preparation and private study time, laboratory classes, examinations, clinical attendance, professional training placements, and so on as appropriate. There is no intrinsic relationship between the credit volume of a module and its level of difficulty.

The European **norm for full-time study over one academic year is 60 ECTS**. The Trinity academic year is 40

weeks from the start of Michaelmas Term to the end of the annual examination period. 1 ECTS of credit represents 20-25 hours estimated student input, so a 10-credit module will be designed to require 200-250 hours of student input including class contact time and assessments.

ECTS credits are awarded to a student only upon successful completion of the course year. Progression from one year to the next is determined by the course regulations. Students who fail a year of their course will not obtain credit for that year even if they have passed certain component modules. Exceptions to this rule are one-year and part-year visiting students, who are awarded credit for individual modules successfully completed.

HARMONISATION AND EXAM REGULATIONS

1. GENERAL COLLEGE REGULATIONS

General College regulations with regard to examinations shall apply to all examinations in Science as set out in the University Calendar 2016-17 (available for download from each JS webpage – see URLs on p.1)

2. EXAMINATION REGULATIONS – JUNIOR SOPHISTER

2.1. Examination timetables are published in advance of the dates of examinations on the College website at

<http://www.tcd.ie/academicregistry/exams/timetables-dates/>

The College reserves the *right to alter the published time and date of an examination in exceptional circumstances*. Students should ensure that they are available for examinations for the duration of the relevant examination session as stated in the Almanack.

2.2. Junior Sophister students must, in the first instance, sit the annual examination and meet the requirements of the course.

2.3 The Junior Sophister Annual Examination has a two-fold purpose. It is (a) the final examination for the Ordinary BA degree and (b) a qualifying examination to proceed to the Senior Sophister year as a Moderatorship candidate. A student who rises to, and completes, the Senior Sophister year, but fails the Moderatorship examination, is still qualified for the award of an Ordinary BA degree on the basis of a successful performance in the Junior Sophister examination.

Students who pass the Junior Sophister examination can have the Ordinary BA degree conferred if they do not choose, or are not qualified, to proceed to Moderatorship. Except by special permission of the University Council, on the recommendation of the Course Director, the ordinary degree of BA may be conferred only on candidates who have spent at least three years in the course.

2.4 To pass the Junior Sophister examination, students must achieve an overall credit-weighted average mark of 40% and accumulate 60 credits by

(a) passing all modules outright or

(b) passing by compensation or aggregation and accumulation.

2.5 To compensate / aggregate students must

obtain an overall mark of 40% or higher AND EITHER (compensate)

(ii) obtain individual marks of 40% or higher in modules to the value of 40 credits with a minimum mark

of 30% in the each of the failed modules up to a maximum of 20 credits.

OR (aggregate)

(iii) obtain individual marks of 40% or higher in modules to the value of 40 credits with a minimum mark of 30% in additional modules of at least 10 credits.

- 2.6** To qualify to proceed to Moderatorship, students sitting the Junior Sophister examination for the first time must pass the year and achieve a mark of 45% or higher in the overall examination.
- 2.7** Students who achieve an overall grade of 34.5% or higher, but who are not qualified to proceed to Moderatorship can repeat the Junior Sophister year in order to qualify to proceed to Moderatorship or qualify for an Ordinary BA degree.
- 2.8** Students whose overall mark is 34.49% or lower in the annual examinations are not permitted to repeat their year and must withdraw from the course.
- 3.0** A student may not repeat the Junior Sophister year more than once, except by special permission of the University Council.
- 3.1** The final degree award for students who pass the Senior Sophister examination will comprise a combination of the Junior Sophister and Senior Sophister marks in a 35:65 ratio, i.e., 35% of your final degree mark will be determined by your overall Junior Sophister mark.

MEDICAL CERTIFICATION

During the first two years the Science Course Office coordinate the submission of medical certificates. In the Sophister years certification is dealt with by the School Office in the Chemistry Building.

Medical Certificates:

A Medical Certificate from a GP is required for absences of 3 days or more. Students should submit such a certificate directly to the School of Chemistry office and complete a medical certificate form which states the dates and labs/courses missed, the name(s) and email address of the member(s) of staff associated with the missed labs/courses and the name and email address of the student's College Tutor. This must be done on the day of their return to College.

Where a student misses an assigned laboratory practical class, they should inform the laboratory practical supervisor of their absence at the next session and confirm that they have submitted a medical certificate. The student may be awarded an average mark for the lab missed and/or be given permission to submit a late report where appropriate (at the discretion of the lab coordinator).

Self-Certification:

For periods of illness of less than three days (but no more than two days, either as single or consecutive days, in any academic year) a student may 'self-certify' their illness using the appropriate forms available from the School of Chemistry office. This will require the dates and codes for labs/courses missed, the name(s) and email address of the member(s) of staff associated with the missed labs/courses and the name and email address of the student's College Tutor. This must be done on the day of their return to College.

Where a student misses an assigned laboratory practical class, they should inform the laboratory practical supervisor of their absence at the next session and confirm that they have completed a self-certification form. The student may be awarded an average mark for any labs missed and/or be given permission to submit a late report where appropriate (at the discretion of the lab coordinator).

JS-MODERATORSHIP IN CHEMISTRY

This academic year will be based on the following 60 ECTS:

Core modules/Practical course: 55 ECTS

Optional Module or Broad Curriculum: 5 ECTS

Year Coordinator: Prof. Mike Southern (southerj@tcd.ie; 896 3411)

Core Modules:

Semester 1 (11 weeks)	Semester 2 (11 weeks)
<p>Inorganic Chemistry I CH3103: Organometallics & Coordination Chemistry (10 ECTS) Organometallics (11L) Transition metal compounds and complexes (11L) Inorganic reactions mechanism and homogenous catalysis (11L) The inorganic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Inorganic Chemistry II CH3104: Solid State Materials (5 ECTS) Inorganic polymers (11L) Structural inorganic chemistry (7L) Characterisation techniques of solid state materials (9L) Surface science (6L)</p>
<p>Organic Chemistry I CH3203: Synthetic Organic Chemistry I (10 ECTS) Organometallic C-C couplings (9L) Pericyclic reactions, FMO theory & stereoelectronic effects (15L) Physical organic chemistry (9L) The organic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Organic Chemistry II CH3204: Synthetic Organic Chemistry II (5 ECTS) Heterocyclic chemistry (9L) Organoheteroatom chemistry (15L) FGI and retrosynthesis (9L)</p>
<p>Physical Chemistry I CH3303: Quantum Mechanical Concepts in Physical Chemistry (5 ECTS) Quantum mechanics (15L) Spectroscopy (9L) Group theory (9L)</p>	<p>Physical Chemistry II CH3304: Molecular Thermodynamics and Kinetics (10 ECTS) Molecular thermodynamics & statistical mechanics (15L) Electrochemistry (9L) & Kinetics (9L) The physical chemistry lab marks (5 ECTS) will be included in the mark for this module</p>
<p>Interdisciplinary Module I CH3403: Analytical Methods (5 ECTS) Analytical chemistry (11L) Organic spectroscopy (11L) Structural methods in inorganic chemistry (11L)</p>	<p>Interdisciplinary Module II CH3404: Biomaterials and Macromolecules (5 ECTS) Bioorganic chemistry & natural products (11L) Bioinorganic chemistry (11L) Soft matter (11L)</p>
<p>CH3080 Practical Chemistry This is a laboratory module broadening the student's knowledge of Physical, Organic and Inorganic Chemistry. As indicated above, lab marks will be rolled in with the exam marks for modules CH3103, CH3203 and CH3304.</p>	

Optional Modules:

CH3441 - Medicinal Chemistry (5 ECTS)

This module covers fundamental medicinal chemistry. It encompasses an introduction to medicinal chemistry (15L), antiviral and anticancer chemistry (18L), and the computational method QSAR (5P).

OR

CH3601 - Computational Chemistry (5 ECTS)

This module covers numerical methods – optimisation (10L), introduction to static and dynamic atomistic simulation (9L), and computational molecular quantum chemistry (20L).

OR

CH3602 - Quantitative Methods for Chemists (5 ECTS)

This module encompasses courses on Unix/Linux (12L) and Fortran (38L). This material is assessed during the year (no end-of-year examination).

OR

Broad Curriculum (5 ECTS; http://www.tcd.ie/Broad_Curriculum/). Please note that you can obtain a registration form for the Broad Curriculum modules from the School Office. If choosing a Broad Curriculum module, you must inform the School Office of the module(s) you are taking.

JS - MODERATORSHIP IN MEDICINAL CHEMISTRY

This academic year will be based on the following 60 ECTS:

Course Director: Prof. Eoin Scanlan (SCANLAE@tcd.ie; 896 2514)

Core Modules:

Semester 1 (11 weeks)	Semester 2 (11 weeks)
<p>Inorganic Chemistry I CH3103: Organometallics & Coordination Chemistry (10 ECTS) Organometallics (11L) Transition metal compounds and complexes (11L) Inorganic reactions mechanism and homogenous catalysis (11L) The inorganic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Physical Chemistry II CH3304: Molecular Thermodynamics and Kinetics (10 ECTS) Thermodynamics & statistical mechanics (15L) Electrochemistry (9L) Kinetics (9L) The physical chemistry lab marks (5 ECTS) will be included in the mark for this module</p>
<p>Organic Chemistry I CH3203: Synthetic Organic Chemistry I (10 ECTS) Organometallic C-C couplings (9L) Pericyclic reactions, FMO theory & stereoelectronic effects (15L) Physical organic chemistry (9L) The organic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Organic Chemistry II CH3204: Synthetic Organic Chemistry II (5 ECTS) Heterocyclic chemistry (9L) Organoheteroatom chemistry (15L) FGI and retrosynthesis (9L)</p>
<p>Interdisciplinary Module I CH3403: Analytical Methods (5 ECTS) Analytical chemistry (11L) Organic spectroscopy (11L) Structural methods in inorganic chemistry (11L)</p>	<p>Interdisciplinary Module II CH3404: Biomaterials and Macromolecules (5 ECTS) Bioorganic chemistry & natural products (11L) Bioinorganic chemistry (11L) Soft matter (11L)</p>
<p>Medicinal Chemistry I - CH3441: Introduction to Medicinal Chemistry (5 ECTS) Introduction to medicinal chemistry (15L) Antiviral, anticancer chemistry and QSAR (18L).</p>	
<p>Medicinal Chemistry II - CH3446: Microbiology and Medicinal Chemistry (5 ECTS) Antimicrobial agents (12L) Anti-infective agents (10L) Antimalarial and industrial medical chemistry (11L) (by partial continuous assessment).</p>	
<p>Medicinal Chemistry III - CH3447: Biochemistry and Pharmacology (5 ECTS) Protein structure, function, activity and regulation (15L) Receptors, drugs and the autonomic nervous system (9L) & Steroids (9L)</p>	
<p>CH3480 Practical Chemistry This is a laboratory module broadening the student's knowledge in Physical, Organic and Inorganic Chemistry. As indicated above, lab marks will be rolled in with the exam marks for modules CH3103, CH3203 and CH3304.</p>	

JS-MODERATORSHIP IN CHEMISTRY WITH MOLECULAR MODELLING

This academic year will be based on the following 60 ECTS:

Course Director: Prof. Graeme Watson (watsong@tcd.ie; 896 1357)

Core Modules:

Semester 1 (11 weeks)	Semester 2 (11 weeks)
<p>Inorganic Chemistry I CH3103: Organometallics & Coordination Chemistry (10 ECTS) Organometallics (11L) Transition metal compounds and complexes (11L) Inorganic reactions mechanism and homogenous catalysis (11L) The inorganic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Inorganic Chemistry II CH3104: Solid State Materials (5 ECTS) Inorganic polymers (11L) Structural inorganic chemistry (7L) Characterisation techniques of solid state materials (9L) Surface science (6L)</p>
<p>Organic Chemistry I CH3203: Synthetic Organic Chemistry I (10 ECTS) Organometallic C-C couplings (9L) Pericyclic reactions, FMO theory & stereoelectronic effects (15L) Physical organic chemistry (9L) The organic chemistry lab marks (5 ECTS) will be included in the mark for this module</p>	<p>Organic Chemistry II CH3204: Synthetic Organic Chemistry II (5 ECTS) Heterocyclic chemistry (9L) Organoheteroatom chemistry (15L) FGI and retrosynthesis (9L)</p>
<p>Physical Chemistry I CH3303: Quantum Mechanical Concepts in Physical Chemistry (5 ECTS) Quantum mechanics (15L) Spectroscopy (9L) Group theory (9L)</p>	<p>Physical Chemistry II CH3304: Molecular Thermodynamics and Kinetics (10 ECTS) Thermodynamics & statistical mechanics (15L) Electrochemistry (9L) Kinetics (9L) The physical chemistry lab marks (5 ECTS) will be included in the mark for this module</p>
<p>Interdisciplinary Module I CH3403: Analytical Methods (5 ECTS) Analytical chemistry (11L) Organic spectroscopy (11L) Structural methods in inorganic chemistry (11L)</p>	<p>Computational Chemistry I CH3601: Computational Chemistry (5 ECTS) Numerical methods – optimisation (10L) Static and dynamic atomistic simulation (9L) Computational molecular quantum chemistry (20L)</p>
<p>CH3602: Computational Chemistry II (5 ECTS) This module encompasses courses on Unix/Linux (12L) and Fortran (38L). This material is assessed during the year (no end-of-year examination).</p>	
<p>CH3680: Practical Chemistry This is a laboratory module broadening the student's knowledge of Physical, Organic, and Inorganic Chemistry, and of molecular modelling. As indicated above, lab marks will be rolled in with the exam marks for modules CH3103, CH3203 and CH3304.</p>	

End-of-year examinations

The exam structure will change in 2016/17 with the provision of separate exam papers for each module. Details will be circulated later in the academic year.

While every effort will be made to give due notice of major changes, the School of Chemistry and Science Course Office reserve the right to suspend, alter or initiate modules, timetables, examinations and regulations at any time.
